

WELCOME!

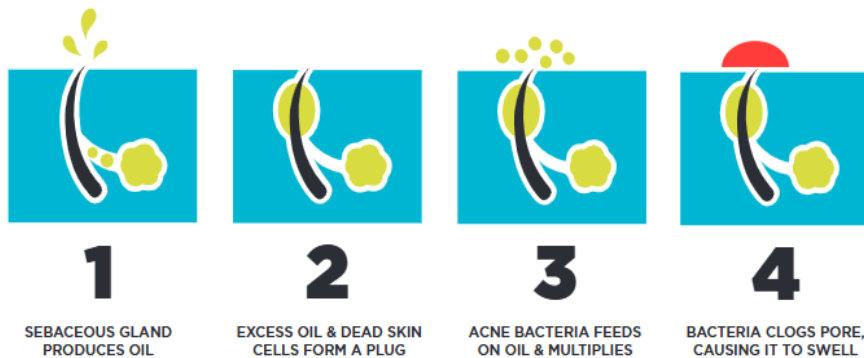

WHAT CAUSES ACNE?

Pimples are the final step in a reaction that starts when skin makes too much oil. Pores get clogged with a buildup of sebum and dead skin cells, which allows acne bacteria to thrive, causing redness and swelling.

What triggers excess oil? Genetics, stress and hormones can all play a part. Whether you're a teenager or adult, the secret to controlling breakouts is to stop them from developing before you can see them. That means interrupting the oil-bacteria-pimple cycle.

How do I get rid of blemishes? You need to treat all the causes at the same time -- unblock pores, eliminate excess oil, fight bacteria, and restore a balanced microbiome.

Can I pop, pick and squeeze? No. You risk spreading infection, damaging skin and causing scars.

WHAT'S THE MICROBIOME?

It's the skin's natural **ecosystem of bacteria** that helps it stay calm and clear. Sometimes the microbiome gets out of balance, when 'bad' bacteria overwhelm the 'good' bacteria. This can lead to acne [breakouts].

The science behind Clear Smart works in multiple ways. The formulas adapt to skin's unique microbiome and help skin fight back against even troublesome acne [break-outs] without disrupting its natural balance.

The result? An effective defense that promotes a clear, blemish-free complexion.
